

WINDOWS PROGRAMMING

Developing windows applications with Entity framework – Part 2 (Model first)

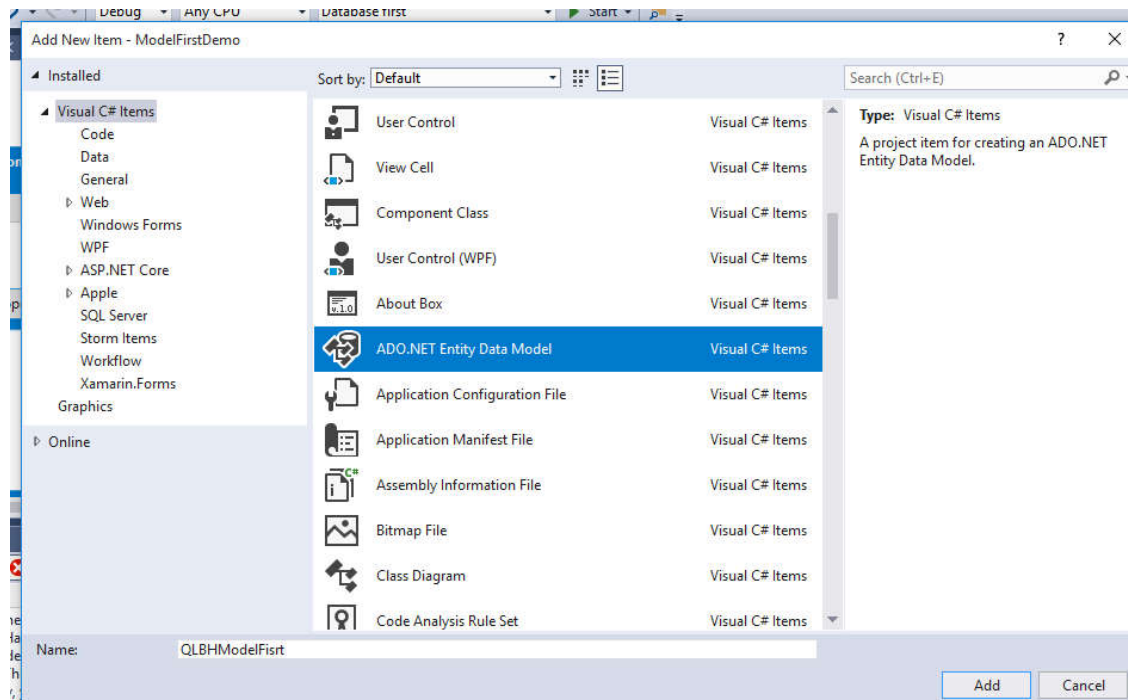

Dr. Le Van Vinh
FIT - HCMUTE

This part help you develop operation City management using Entity framework following **Model first** technique.

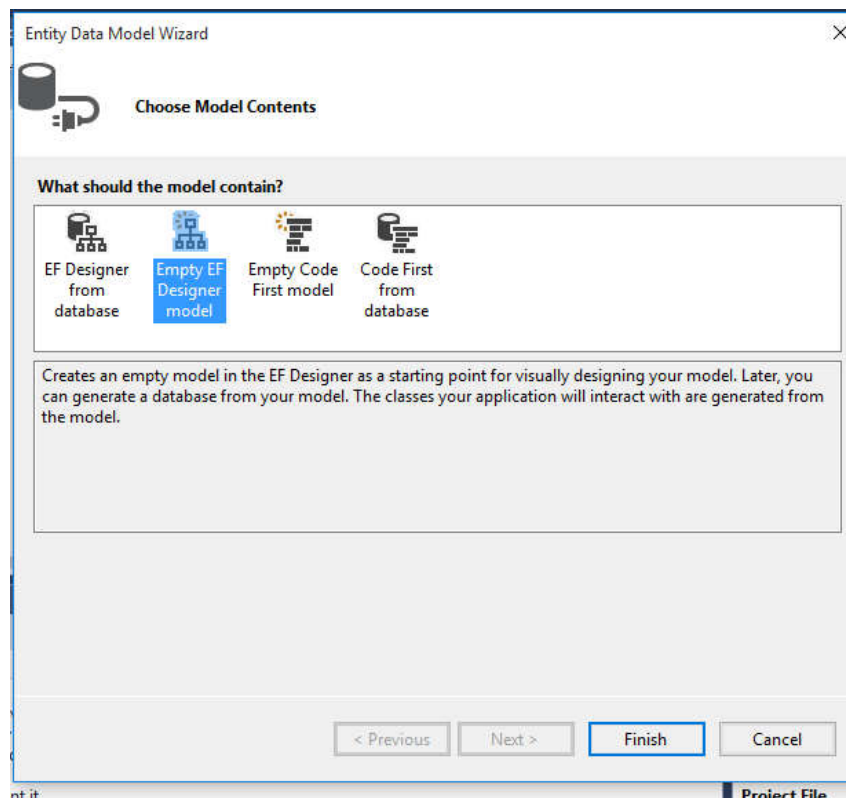

+ Step 1: Designing model

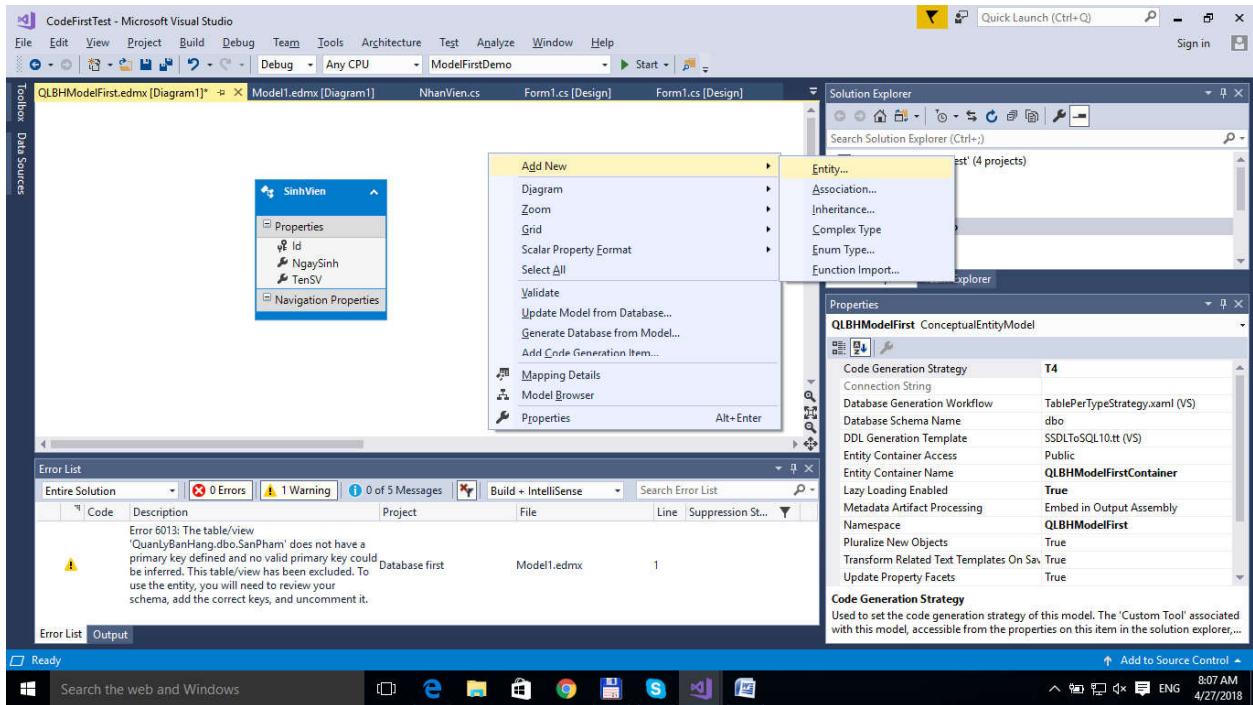

+ Choos ADO.NET Entity Data Model

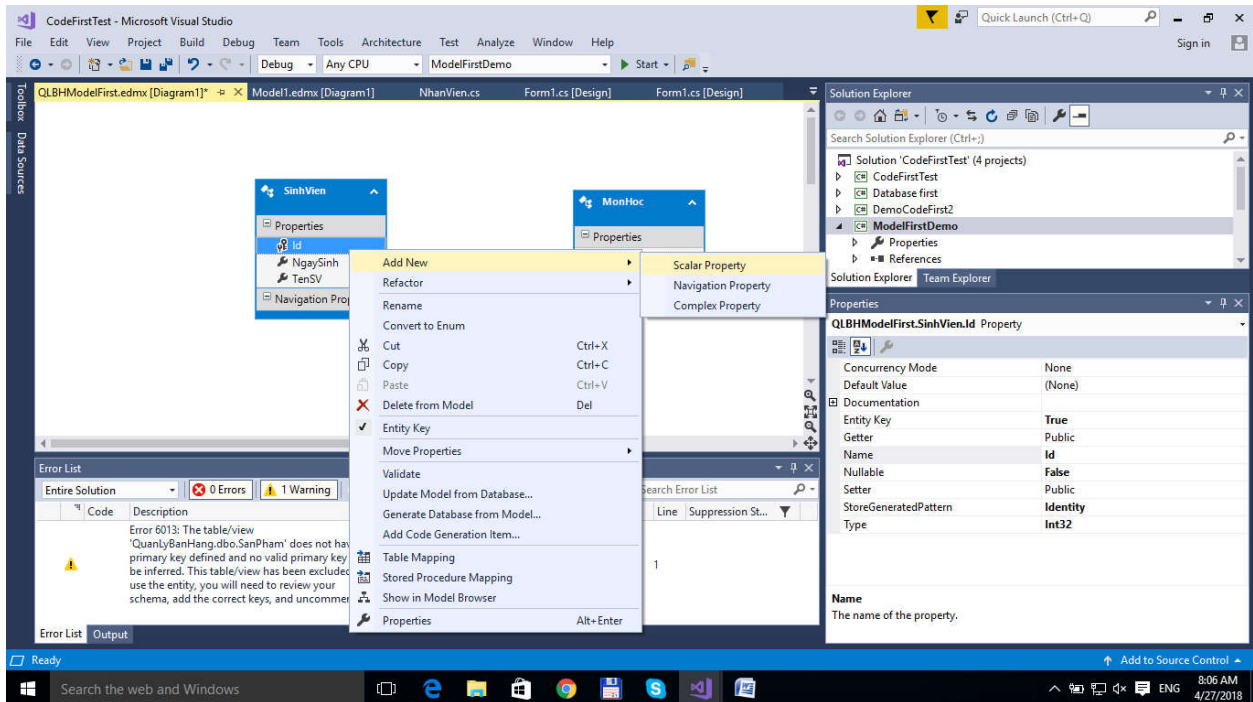

+ Choose Empty EF Designer model

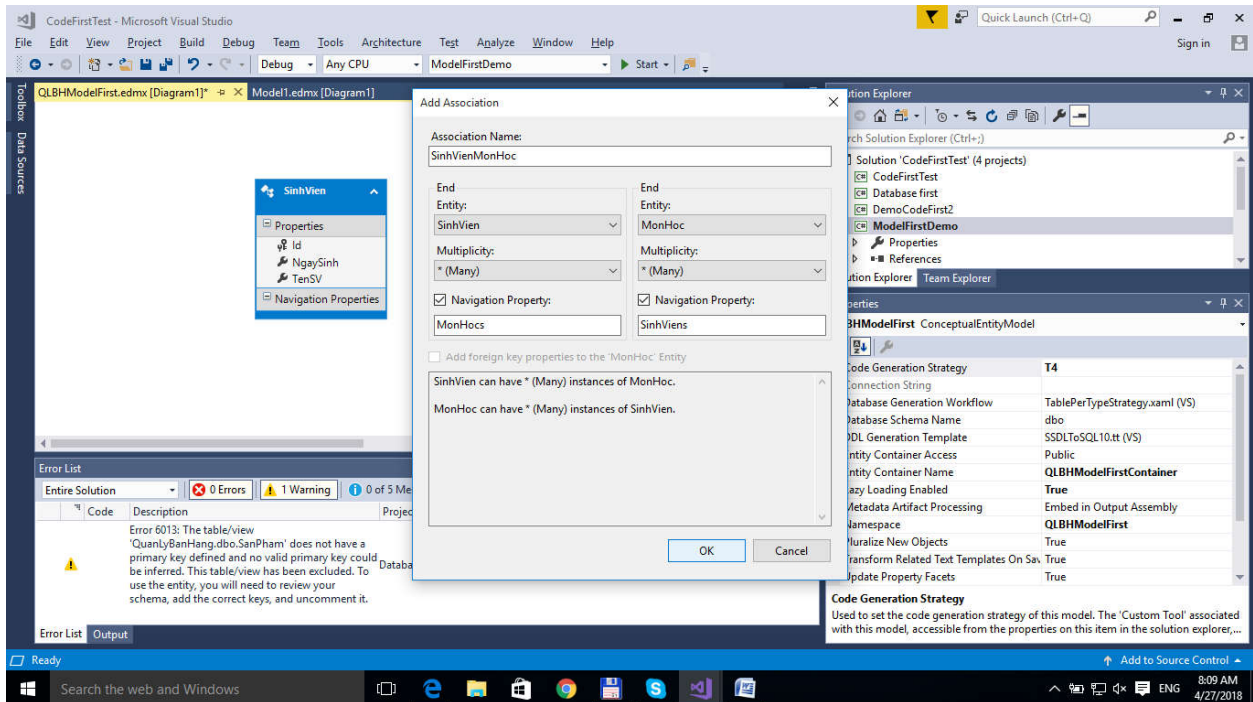

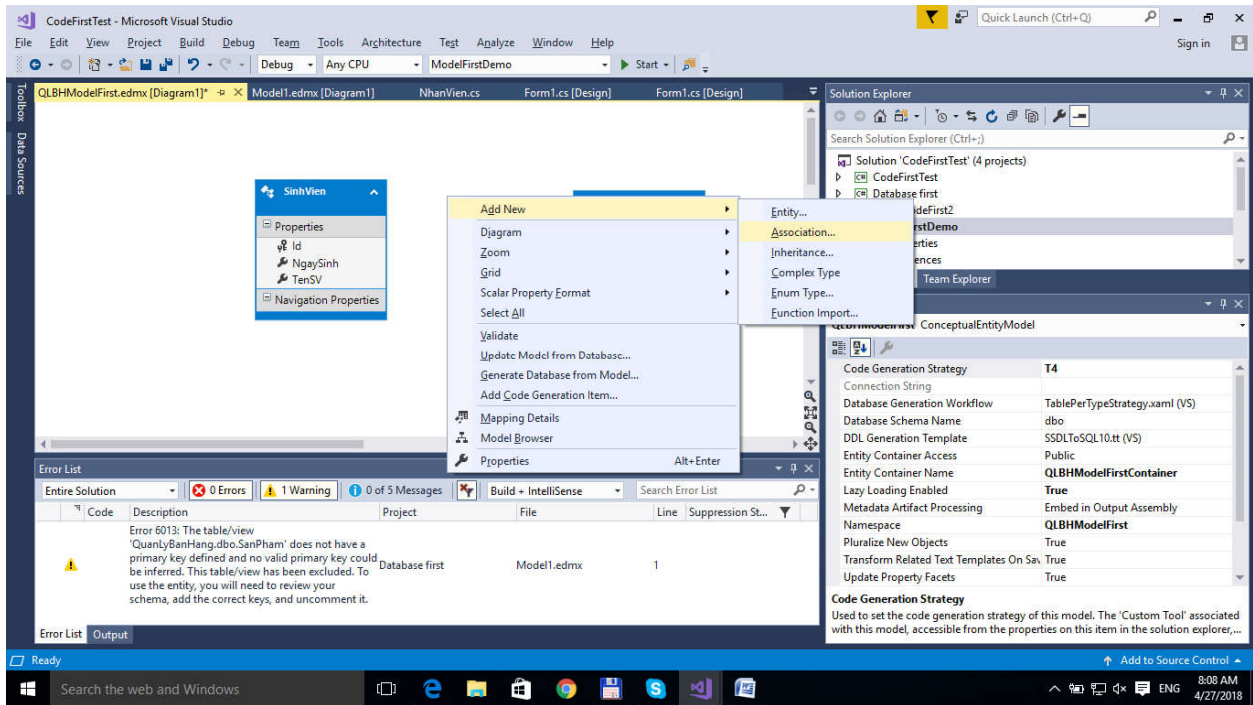

+ Creating Entity classes

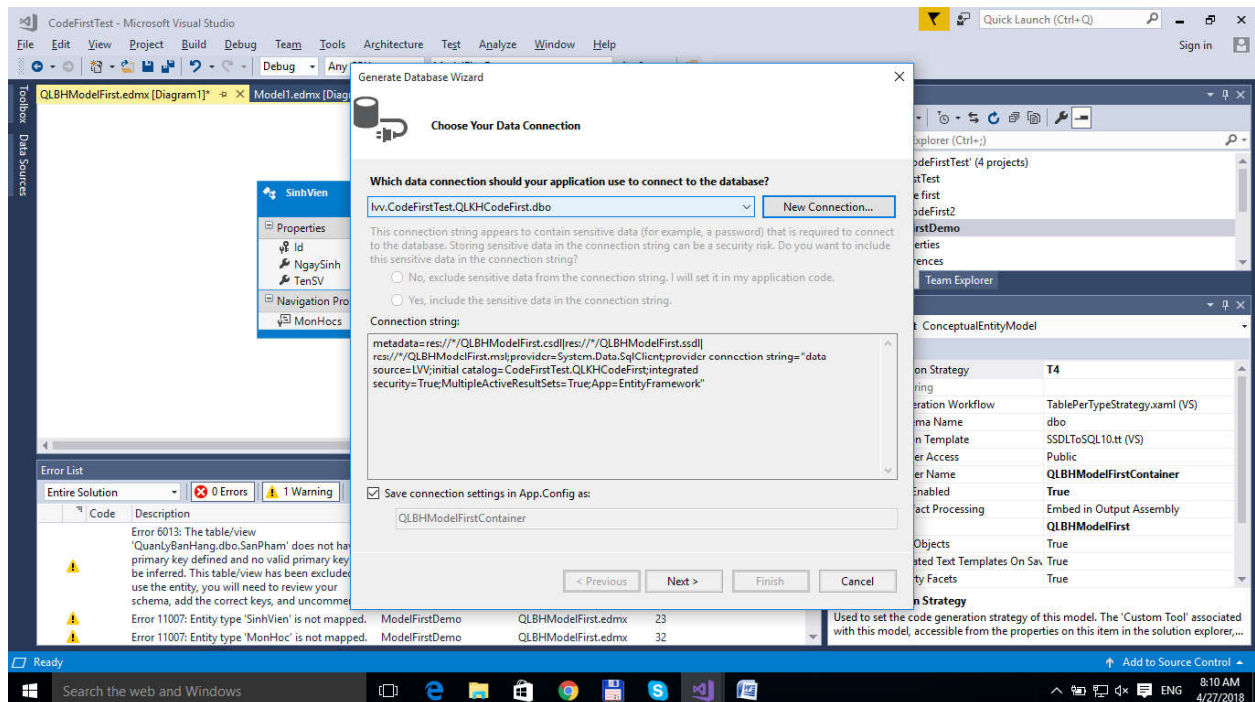

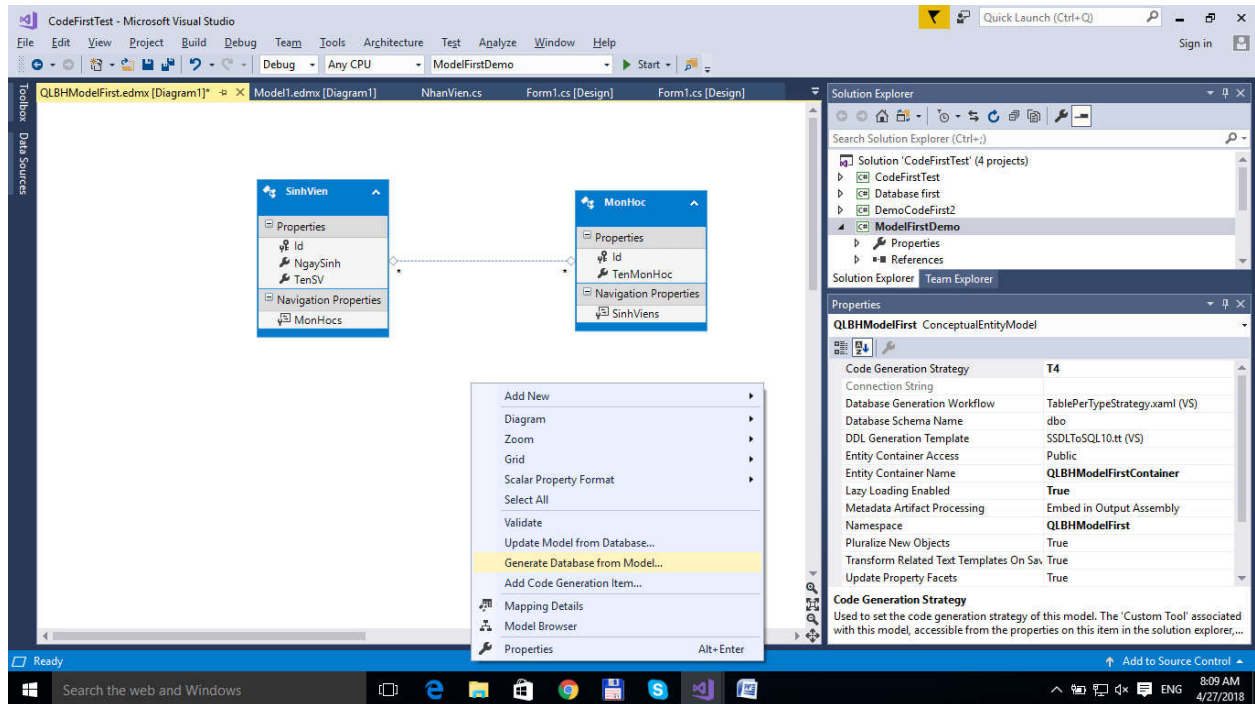

+ Tạo các Thuộc tính:

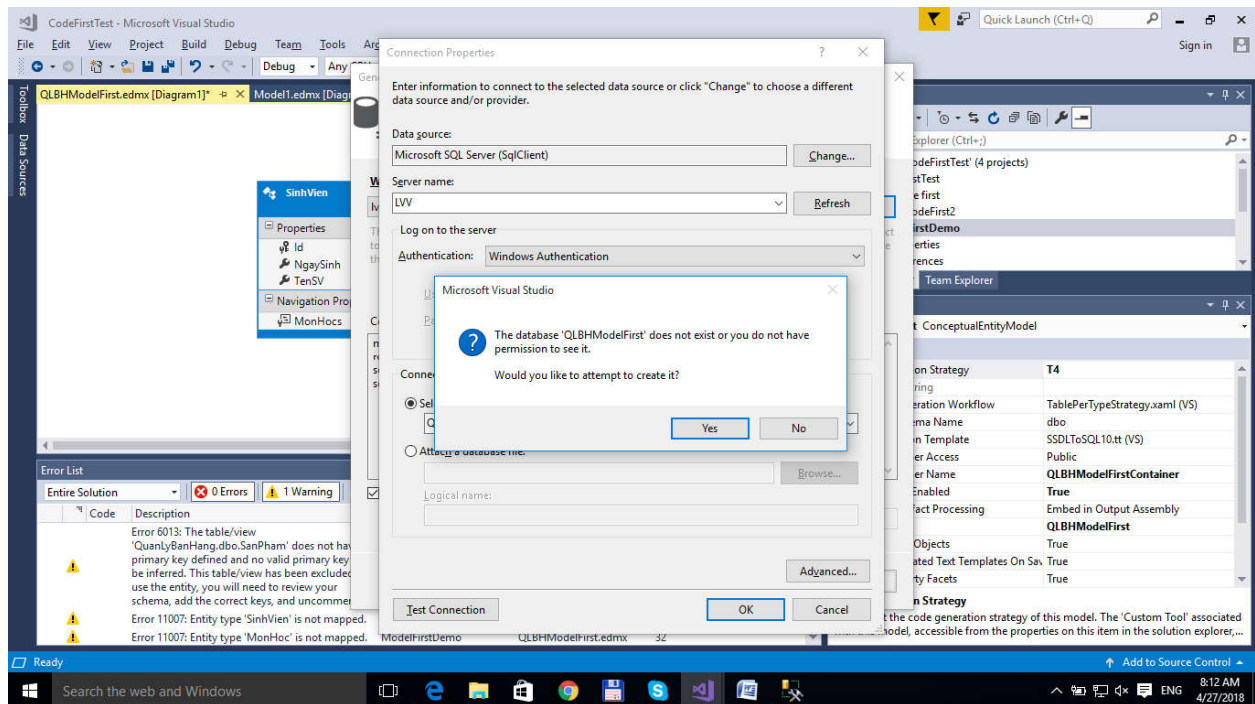

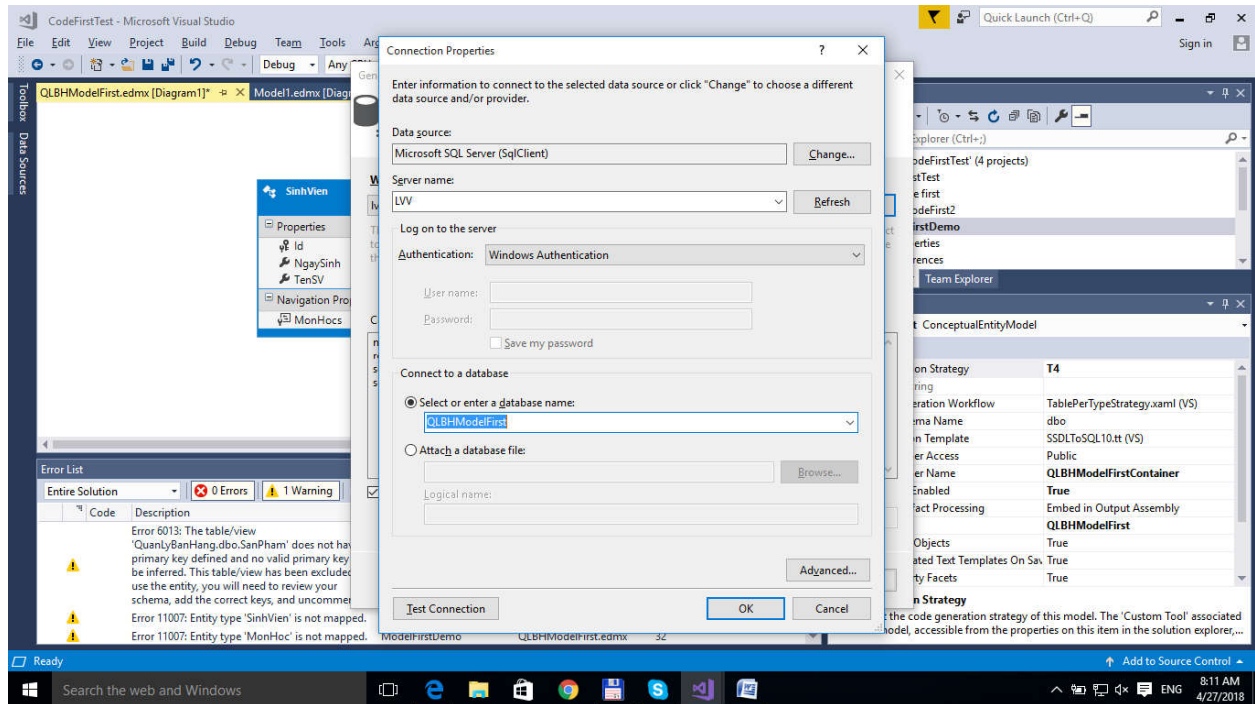

+ Create relationship between classes

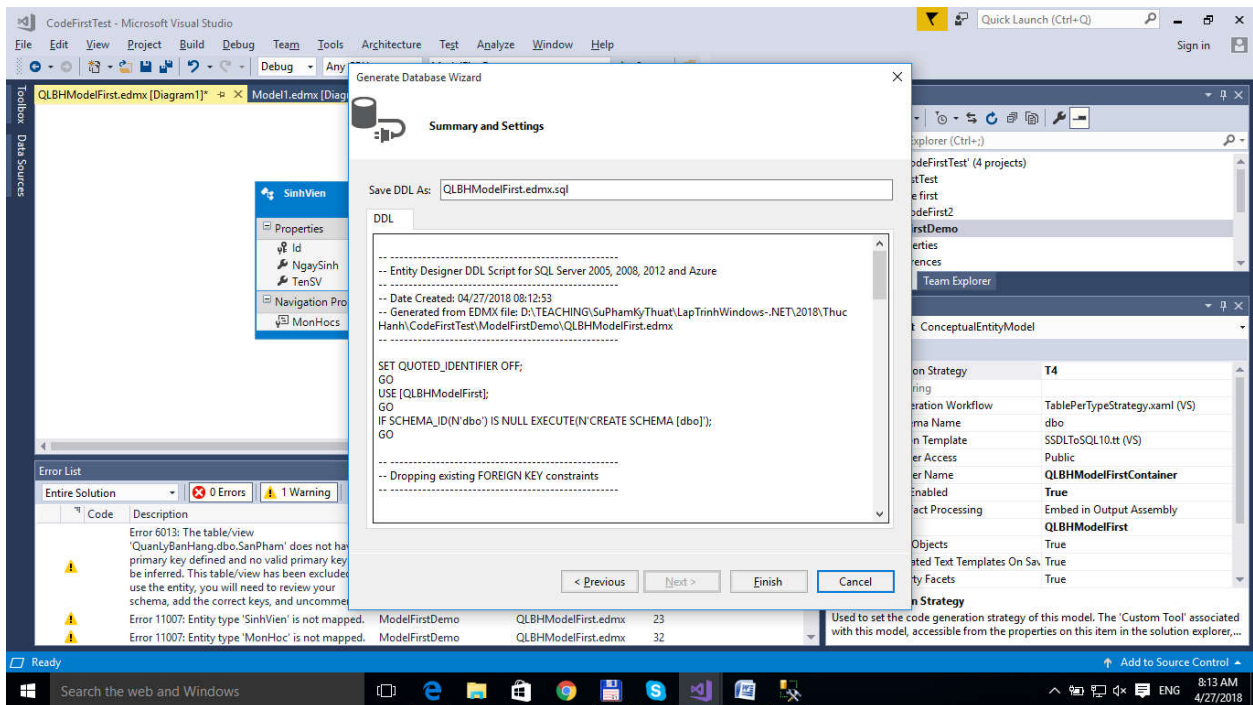

+ Generating database from the model

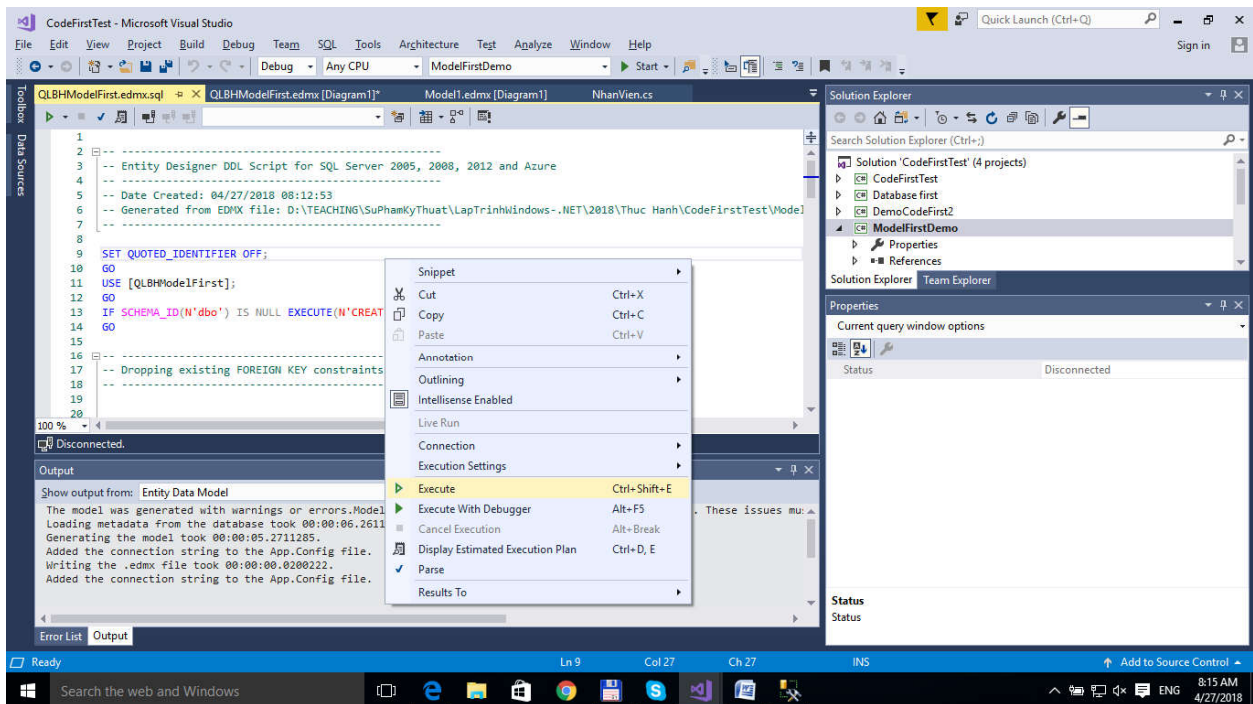

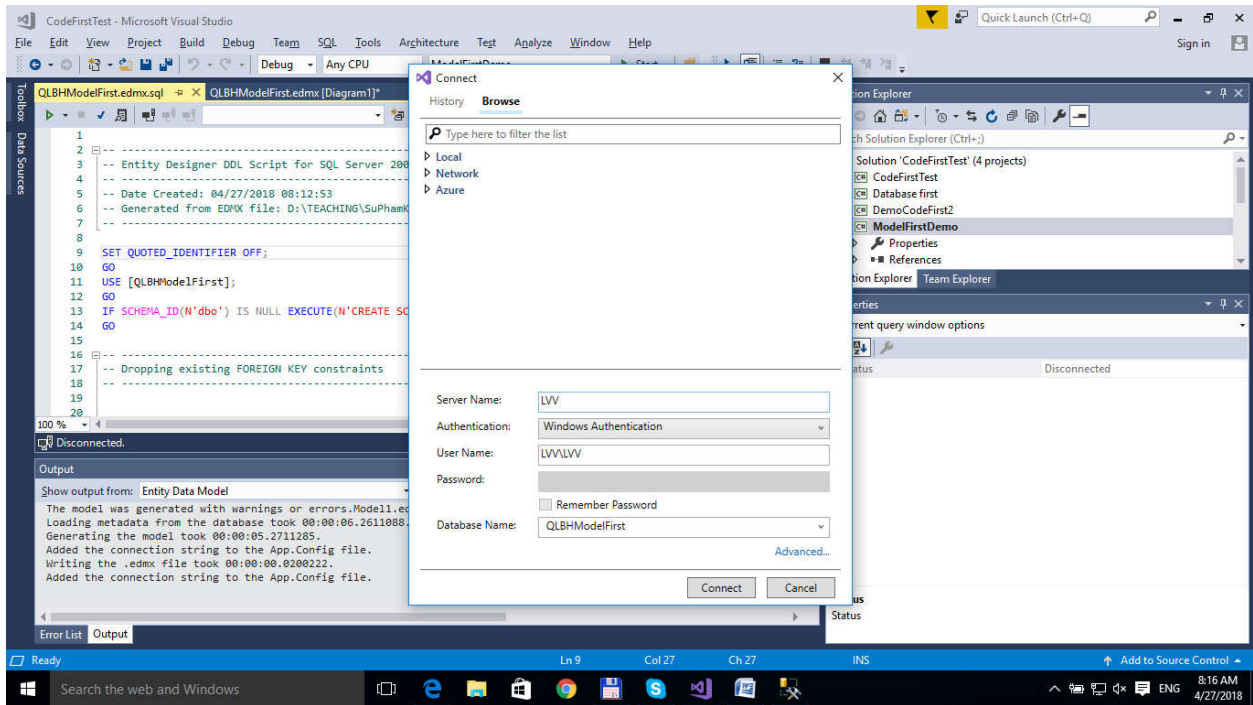

+ Naming the database: QLBMModelFirst

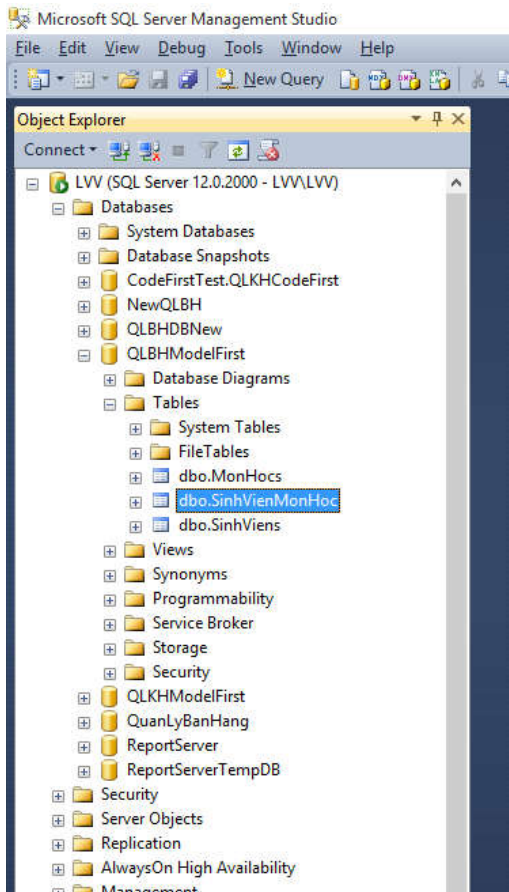

+ Choose file QLBHMModelFirst.edmx.sql. Then, right click and choose Execute.

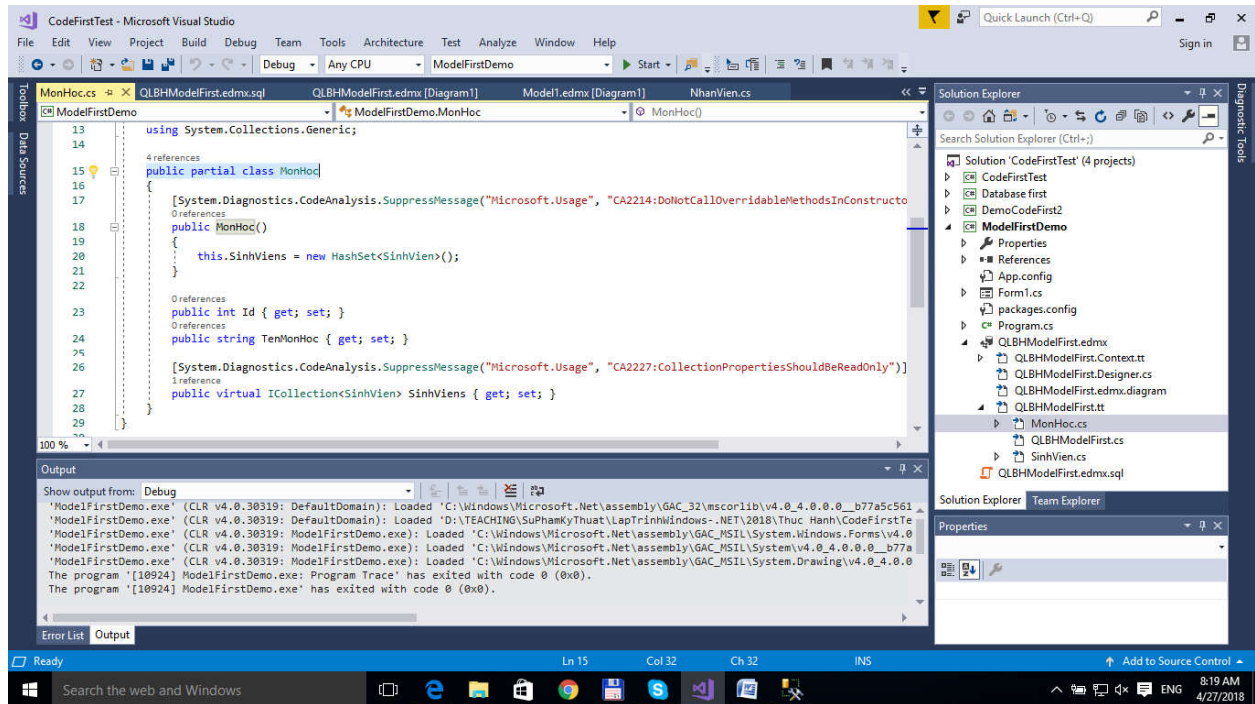

+ Results o SQL server

+ Run the application to generate code of the classes in the model

+ We can see contents in file App.config.
